

# Detailed Design and Build Review Update

Friction Force Explorers

Neil Jassal

Rachel Holladay

Yichu Jin

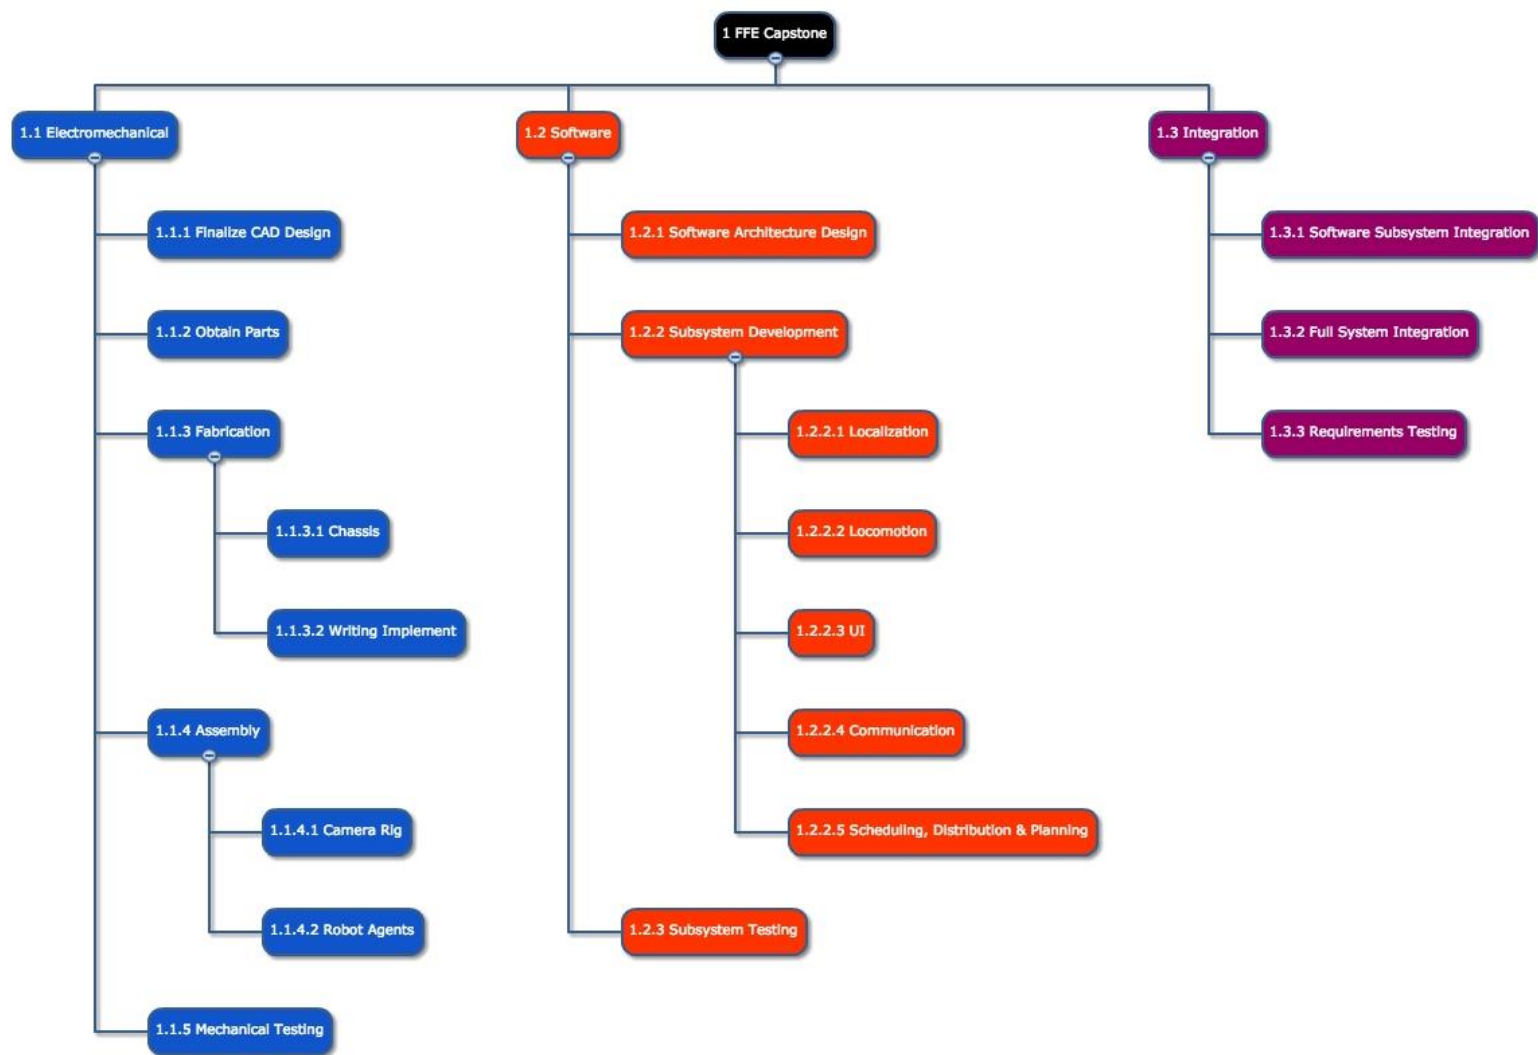

Zhaodong Zheng

Objective:

To develop a **multi-agent system** that collaboratively and efficiently **draws** inputted images at variable scale.

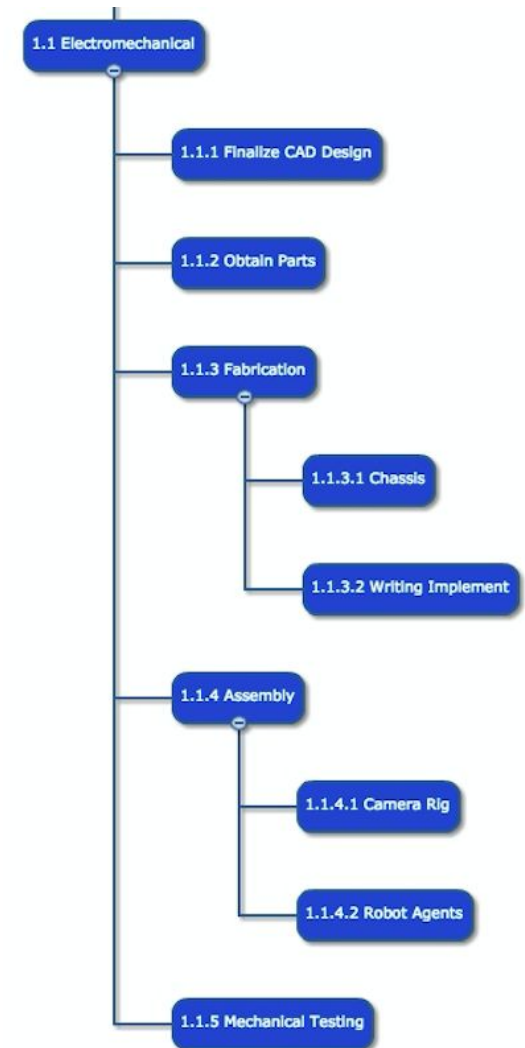

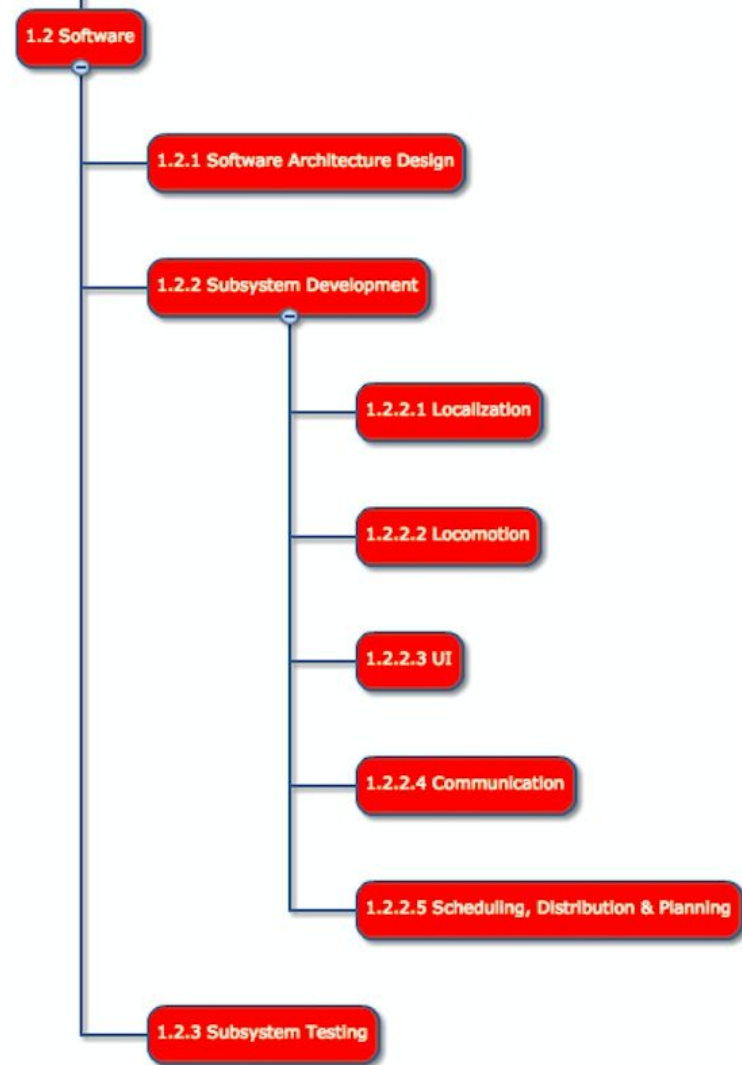

# Electromechanical WBS Tree

|                    |   |                |                     |
|--------------------|---|----------------|---------------------|
| WBS#:              | 1.1.4.1   | Task:          | Assemble Camera Rig |
| Est. Effort (hrs): | 3   | Owner:         | Don                 |
| Resources:         | Scrap wood  | Work products: | Camera rig          |
| Description:       | Build the rig used to hold the camera for the vision system above the drawing space   |                |                     |
| Input:             | Measurements from demo space  |                |                     |
| Dependencies:      | Confirmation of demo space location   |                |                     |
| Risks:             | No extra wood is available, demo space does not have adequate room for the camera rig |                |                     |

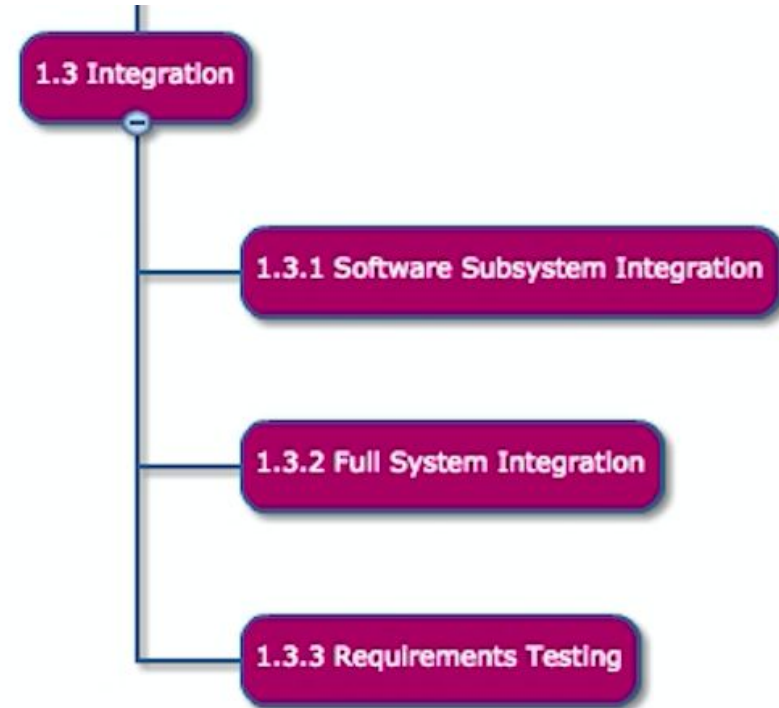

# Software WBS Tree

|                    |  |                |  |
|--------------------|--|----------------|--|
| WBS#:              | 1.2.2.4  | Task:          | Communication  |
| Est. Effort (hrs): | 8  | Owner:         | Neil   |
| Resources:         | Wireless comm. libraries   | Work products: | Functions for sending info. back and forth from robots |
| Description:       | Create a reliable communication system between the robots and the central data processing unit |                |  |
| Input:             | Software flowchart, decisions on software libraries  |                |  |
| Dependencies:      | Software architecture design   |                |  |
| Risks:             | Wireless hardware is unreliable or interfaces poorly with other software or hardware           |                |  |

# Integration WBS Tree

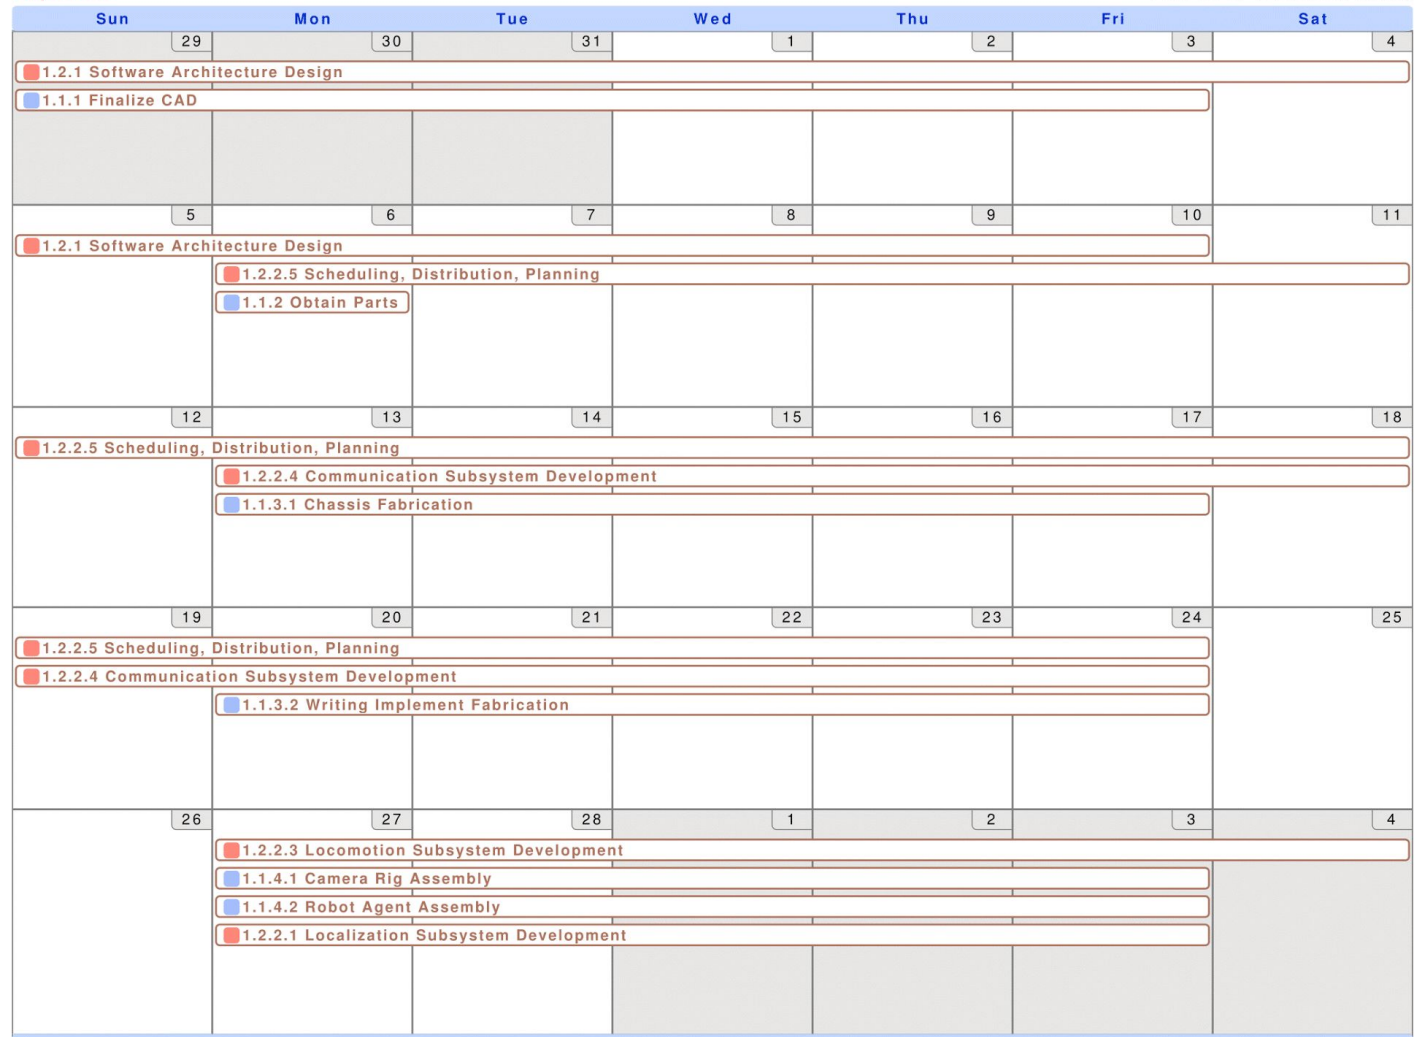

|                    |  |                |                            |
|--------------------|--|----------------|----------------------------|
| WBS#:              | 1.3.1  | Task:          | Software Integration       |
| Est. Effort (hrs): | 3  | Owner:         | All                        |
| Resources:         | Software subsystems  | Work products: | Complete software pipeline |
| Description:       | Test integration of all software components by creating an end to end pipeline consisting of all software subsystems |                |                            |
| Input:             | Completed and individually verified software subsystems  |                |                            |
| Dependencies:      | Subsystem testing  |                |                            |
| Risks:             | Subsystems cannot integrate with each other  |                |                            |

# Mechanical Updates - Full System

Dad

Son

# Mechanical Updates - Painting Mechanism

Dad

Son

- Use lever mechanism instead of screw mechanism
- Decrease mechanical complexity, fabrication cost, and fabrication time
- Depends on the marker dimension, either use internal ribs or clip fitting mechanism to hold the chalk.
